Hey guys whats up if you are reading this then you have downloaded the correct file and are now ready to hack into anything you want.

1.the first thing below this all you have to do is copy and paste it into terminal or command center then press enter then type in your computer password.

2. For the second one you need to type in the url for a page but it has to be specific like - www.facebook.com it can't be like http//:youtube.com/ajxcy/mhee-dfsud it has to be www. and then your link, but as you can see i have already included the www. address in there so remember have fun with this but try not to get in trouble :/

1. sudo tcpdump -i en1

2. sudo ping -f www.
